SUMMARY

DevOps & Cloud-Native Backend Engineer with hands-on production experience across **Azure infrastructure, governance, and CI/CD** — resource inventory and tagging automation, **Azure Managed Redis** and cache architecture, production incident diagnosis, **Log Analytics/Application Insights** observability, and **Azure DevOps** pipeline development. Operates **Docker/Kubernetes (AKS)** workloads and event-driven microservices (**Kafka, RabbitMQ, Redis, PostgreSQL**) with a strong **Python, Java, C++** engineering foundation underneath. Holds a **B.Tech in Computer Science** from **BML Munjal University**.

EDUCATION

B.Tech, Computer Science & Engineering
BML Munjal University, Gurugram

CGPA: 8.08 / 10
2020 – 2024

EXPERIENCE

Centific — Associate Application Engineer
Chennai, India

Oct 2024 – Aug 2026
Full-Time

Cloud Infrastructure, Governance & Cost

- Automated **Azure governance tagging** across 94 resources via CLI/ARM API scripting, achieving **zero failures** while enforcing cost-center, project, and environment metadata standards.
- Performed a complete **Azure infrastructure inventory** across Dev/QA/UAT/Prod — 8 App Services, 4 PostgreSQL Flexible Servers, Container Apps, Event Hub, **ACR**, and ~20 Application Insights instances.
- Executed Cloud Ops-approved resource cleanup with pre-deletion ARM exports and a **backup/DR assessment** across 20 critical resources, identifying PostgreSQL retention gaps.
- Compared **Azure Managed Redis** vs. AKS-based Redis costs via the Azure Retail Prices API (~\$95–105/mo vs. ~\$605/mo), driving a production-only caching decision.

Production Reliability, CI/CD & Observability

- Diagnosed a **production CI/CD defect** where deployments pushed images to ACR without updating the App Service image tag, silently serving stale production code.
- Designed and deployed **Azure Managed Redis** (B3, HA, TLS, private endpoint/DNS) for production caching with rollback controls and monitoring alerts; baselined backend latency at ~57ms p95.
- Built **Azure DevOps CI/CD** pipelines for backend/frontend npm package publishing, and diagnosed **Docker/npm** authentication failures across API, worker, and consumer services.
- Implemented Azure **Diagnostic Settings** and **Log Analytics** ingestion, automating telemetry-based monitoring cost estimation within an approved budget envelope.

Security, Platform & Distributed Systems

- Authored reusable **CrowdStrike Falcon** security-agent deployment runbooks spanning 5 Azure subscriptions and 6 **AKS** clusters.
- Designed and owned microservice **REST APIs** and event-driven services (**Kafka, RabbitMQ, Redis, PostgreSQL**) for Loop 1.0, an annotation platform later acquired by a customer in an approximately **\$1M** deal.
- Managed service configuration and secrets with **Azure Key Vault** and **HashiCorp Vault**; audited **Azure AD App Registrations** during an authentication migration.

Movidu Tech. — Data Analyst Intern

Feb 2024 – Aug 2024

Bengaluru, India

- Built **Python ETL** workflows for large datasets — extraction, validation, transformation, and structured storage for analytics.
- Developed logistics dashboards and optimized **route-planning logic**, surfacing operational exceptions for data-driven decisions.

Adoptev — Web Development Intern

Jun 2022 – Jul 2022

Gurugram, India

- Built responsive **ReactJS + Tailwind** components and debugged API integrations to improve cross-device workflow reliability.

PROJECTS

Multi-Workspace AI Document Assistant — RAG & Tool Calling

[GitHub](#)

FastAPI, React, TypeScript, PostgreSQL + pgvector, Gemini, Groq, Docker, GitHub Actions, Render, Neon

- Built and deployed an end-to-end **AI data assistant**: users chat with their documents in isolated workspaces, with **multi-tenant RAG** on one shared pgvector table (isolation enforced inside the SQL vector query), **hybrid vector + full-text search** (RRF), and server-validated citations with calibrated “I don’t know” refusals.
- Designed an **LLM tool-calling agent loop** (task creation, Discord notifications, multi-step search) with **schema-validated arguments**, per-turn limits, audit logging, and **prompt-injection resistance**; **SSE token streaming** with Gemini → Groq model fallback.
- Shipped argon2 + httpOnly-JWT auth, idempotent ingestion, an observability dashboard (latency, tokens, retrieval hit rate), and **80+ tests** in CI that boots the production Docker image.

Distributed Task Processing Platform

[GitHub](#)

Python, FastAPI, Apache Kafka, PostgreSQL, Redis, Docker, SQLAlchemy, Prometheus, Grafana, pytest, GitHub Actions

- Built a 9-service, **event-driven** task processing platform using **Apache Kafka**, **PostgreSQL**, and **Redis**, scaling horizontally through Kafka **consumer groups** with `task_id` partitioning for per-task ordering and cross-task parallelism.
- Implemented **Transactional Outbox** for atomic task-state and event persistence with **at-least-once delivery and idempotent execution**; engineered fault tolerance via **exponential backoff with jitter**, a non-blocking retry topic, a **dead-letter queue**, and lease-based recovery for crashed workers.
- Instrumented **26 Prometheus metrics** and a **23-panel Grafana** dashboard; validated by **210 automated tests** (94 integration tests running against live Kafka/PostgreSQL/Redis) in a 3-stage **GitHub Actions** CI pipeline with end-to-end smoke tests.

TECHNICAL SKILLS

DevOps & Cloud Native: Docker, Kubernetes (AKS), Azure DevOps Pipelines, Azure CLI, ARM API, Git, IaC concepts
Observability: Azure Monitor, Application Insights, Log Analytics, Diagnostic Settings, Prometheus, Grafana
Distributed & Event-Driven: Kafka, RabbitMQ, Redis, Azure Managed Redis, microservices
Backend & Scripting: Python, Java, SQL, C++, REST API design, FastAPI, Flask, OOP, React

Cloud (Azure): App Services, Functions, Container Apps, Event Hub, ACR, Storage, PostgreSQL Flexible Server
Networking & Security: VNETs, Private Endpoints/DNS, CrowdStrike Falcon, Azure App Registrations, TLS
Databases & Caching: PostgreSQL, pgvector, MySQL, Redis, Qdrant
Secrets: Azure Key Vault, HashiCorp Vault, JWT, OAuth

ACHIEVEMENTS

- Student Councilor – 2023
- Sponsorship Lead – 67th Milestone College Festival
